

ACOUSTICAL ENGINEER

An excellent opportunity exists for experienced Acoustical Engineers and graduates to work with a dedicated team of acoustical and environmental engineers for an Australian owned Environmental Consultancy.

A full time position exists in our Sydney Office with opportunities to work interstate and overseas. The position would suit an experienced/graduate engineer looking to move into a senior position to grow a well established consultancy and develop their role.

The acoustical engineering projects currently involve a wide range of projects mainly involving industrial and commercial developments. The firm is heavily involved in outdoor concert's design and compliance. The projects require a detailed understanding of acoustical engineering calculations and developing innovative designs. A thorough knowledge of the Industrial Noise Policy (INP), SoundPlan, ECRTN, Rail and Construction noise assessments is needed. Detailed knowledge of noise insulation in commercial building construction is also essential.

Industry salary and profit sharing conditions apply.

The candidate must also demonstrate experience in dealing with clients, liaising with government authorities, managing projects and supervising junior team members. Strong interpersonal and communication skills are fundamental to the role. A current class C drivers licence is essential.

Role benefits include:

- A friendly team environment;
- An abundance of interesting and challenging projects;
- Business development opportunities; and
- Salary and conditions are attractive, bonuses and profit sharing are available.

The salary package will be based on experience and in line with market guidelines.

Closing date for applications: **16th August 2010**
